# POLICE AND FIRE DEPARTMENT STAFFING: A SURVEY OF WORCESTER AND ELEVEN OTHER CITIES

Report No. 97-1 March 17, 1997

## **EXECUTIVE SUMMARY**

At the request of the City Manager, the Research Bureau has collected data on police and fire department manpower and staffing practices for Worcester and eleven other cities of similar size. Based on this survey, the Research Bureau makes the following observations:

- •Compared to other the northeastern cities surveyed, the Worcester Fire Department ranks somewhere in the middle in staffing. It has the average number of sworn personnel per 1,000 residents (2.76).
- •The northeastern cities are all much higher in their number of sworn personnel per 1,000 residents and per square mile than the western cities surveyed. These staffing differences can be attributed to at least two factors: significantly older housing stocks in the northeastern cities, and the difference in the number of hours worked (42-hour weeks in the northeast versus 56-hour weeks in western cities).
- •Given that the Worcester Fire Department is requesting two additional classes, and that fire union officials have suggested that the size of crews on engines and ladder trucks needs to be increased to at least 5 men, the Research Bureau repeats its recommendation of last year (Report No. 96–3) that the City contract with an outside consult for a comprehensive examination of the fire department. Such an examination would include a study of the number of personnel necessary to provide adequate fire protection for Worcester; work-week and shifts; span of control; kinds of equipment for future purchase; and appropriate location for any new fire stations. Since the cost of each class is about \$750,000 per year, a one-time investment of \$100,000 in such a study makes sense.
- •Compared to other northeastern cities surveyed, the Worcester Police Department ranks quite low in staffing. It has the lowest number of sworn personnel per 1,000 residents and the 2nd-lowest number of sworn personnel per square mile.
- •The western cities surveyed each have much lower numbers of sworn personnel per 1,000 residents and per square mile than all of the northeastern cities.
- •The Worcester Fire Department budget is about average for the northeastern cities, but significantly higher than the western cities. The Worcester Police Department budget is relatively low when compared to both the northeastern and the western cities.
- •While the fire and police department budgets are the same in Worcester, in 9 of the 11 cities surveyed the police department receives substantially more funding than the fire department.

## INTRODUCTION

At the request of the City Manager, the Research Bureau has collected data on police and fire department manpower and staffing practices for Worcester and several other cities of similar size. Included in the survey are eight northeastern cities—Springfield, MA, Providence, RI, Bridgeport, CT, Hartford, CT, New Haven, CT, Waterbury, CT, Rochester, NY, and Syracuse, NY—as well as three western cities—Modesto, CA, Scottsdale, AZ, and Lincoln, NE. The northeastern cities were selected on the basis of several criteria. First, they are generally comparable in population size to Worcester, ranging from 103,000 to 230,000 people. Second, cities had to have a relatively large land area to be included (although few of the cities considered came close to the size of Worcester). Third, for purposes of comparing fire departments, we attempted to select cities that were relatively close to Worcester in the age and composition of their housing stock. The three western cities were included in order to provide some contrast with the staffing levels and practices characteristic of the northeast. Scottsdale is unique among all the cities surveyed in that the City of Scottsdale contracts with a private company, Rural/Metro, for provision of fire protection services.

It is important to note that this survey can provide at best a rough comparison of staffing levels and practices across cities for two reasons. First, the survey contains police and fire department data only for a single year; a comprehensive comparison would require longitudinal data (that is, data across a number of years) for staffing and activity levels (number of responses, number of fires, number of crimes reported, etc.). Second, in comparing staffing across cities, the survey adjusts for differences in population and area, and includes data detailing differences in such factors as hours worked and, in the case of fire department comparisons, differences in characteristics and age of housing; but other factors affecting police and fire protection requirements, such as climate and the topographical character of a city, are not taken into account.

## I. POPULATION AND LAND AREA

Table 1 (see Appendix A) shows population, land area, and population density for the cities included. Syracuse and Modesto are closest to Worcester in population (based on the 1994 Census Bureau population estimates), while Rochester and Modesto are closest to Worcester in land area. In density, the measure that combines population and land area, Springfield, Waterbury, and Modesto come closest to the figure for Worcester.

#### II. HOUSING

Table 2 (see Appendix A) shows the number of housing units, and the average number of housing units per square mile, for each city (housing data is from the 1990 Census). Table 3 shows the percentage of each type of housing unit by city (based on 1990 Census data); Table 4 outlines the age of the housing stock in each city (see Appendix A for both Tables 3 and 4). Both Table 3 and Table 4 indicate that the northeastern cities have relatively comparable housing stocks, especially when contrasted with the three western cities. Housing in the northeastern cities tends to be concentrated in single—unit detached structures and in 2— to 4—unit structures.¹ Scottsdale, Lincoln, and Modesto all have a higher proportion of single—unit detached structures than the northeastern cities, and significantly fewer 2— to 4—unit structures. Similarly, in regard to age of housing stock, Worcester falls roughly in the middle of the

<sup>&</sup>lt;sup>1</sup>Hartford and Springfield are somewhat atypical in their distributions compared to the other northeastern cities. Hartford has relatively few single-unit detached structures, and significantly more 5-9 unit, 10-19 unit, and 20-49 unit structures. Springfield has relatively few 2-4 unit structures.

northeastern cities; three cities (Providence, Rochester, Syracuse) have older housing by median age and by percentage built in 1949 or earlier, and five (New Haven, Bridgeport, Springfield, Hartford, and Waterbury) have somewhat newer housing. The largest proportion of housing in all of these cities (over 50% in all except Waterbury) was built in 1949 or earlier. By contrast, the median housing age in the three western cities is 20–30 years less than in the northeastern cities, and the largest proportion of their housing was built between 1970 and 1990.

## **III. FIRE DEPARTMENT STATISTICS**

The Research Bureau collected data from the twelve cities on current fire department staffing and budgets, number of companies, shift scheduling and hours worked, and number of responses and fires for 1996.

**TABLE 5: NUMBER OF PERSONNEL** 

|                | Authorized<br>Strength* | Total<br>Personnel | Sworn<br>Personnel | Civilian<br>Personnel |
|----------------|-------------------------|--------------------|--------------------|-----------------------|
| Worcester      | 479 (u)                 | 470                | 457                | 13                    |
| Bridgeport     | 356 (u); 15 (c)         | 371                | 356                | 15                    |
| Hartford       | 434 (u)                 | 352                | 346                | 6                     |
| New Haven      | 409 (u & c)             | 369                | 356                | 13                    |
| Providence     | 539 (u)                 | 492                | 481                | 11                    |
| Rochester      | 526 (u); 34 (c)         | 558                | 533                | 25                    |
| Springfield    | 450 (u)                 | 362                | 356                | 6                     |
| Syracuse       | 421 (u)                 | 431                | 421                | 10                    |
| Waterbury      | 337 (u); 6 (c)          | 337                | 323                | 6                     |
| Scottsdale, AZ | **                      | 147                | 132†               | 15                    |
| Lincoln, NE    | 267 (u)                 | 267                | 259                | 8                     |
| Modesto, CA    | 142 (u)                 | 152                | 138                | 14                    |

<sup>\*&#</sup>x27;u' = sworn; 'c' = civilian

Table 5 outlines authorized positions, number of sworn personnel, number of civilian personnel, and total personnel (i.e., sworn and civilian). Worcester ranks third among the cities surveyed in number of sworn personnel. Each northeastern city employs significantly more sworn personnel than any of the western cities. There are no significant differences among the cities regarding the number of civilians employed.

<sup>\*\*</sup>By contract, Rural/Metro is required to staff 52 sworn personnel per day. It takes 2.51 employees to fill 1 position; therefore the department's minimum required strength is approximately 131.

<sup>&</sup>lt;sup>†</sup>Rural/Metro supplements its full-time staff with a pool of approximately 40 reserves trained by the department, who respond to incidents and are paid on a per diem basis.

TABLE 6: NUMBER OF COMPANIES AND SIZE OF CREWS

| 23   | 0.4  |
|------|--|
|      | 3-4 men engines and ladders  |
| 15   | 4-5 men engines and ladders  |
| 17   | 4-6 men engines and ladders  |
| 19*  | 4 men engines and ladders  |
| 28   | 3-4 men engines and ladders  |
| 18   | 4 men engines; 2 men mini-pumpers; 4 men<br>Quints (combined pumper/ladder trucks) |
| 19   | 4 men engines; 3 men ladders   |
| 18   | 4 men engines; 2 men mini-pumpers; 4 men ladders; 6 men combined engine/ladder     |
| 13   | 3-4 men engines and ladders  |
| 13   | 3 men engines and ladders  |
| 19** | 4 men engines and ladders  |
| 13   | 3 men engines; 4 men ladders   |
|      | 15<br>17<br>19*<br>28<br>18<br>19<br>18  |

<sup>\*</sup>Includes 4 2-man non-transporting EMS units

Table 6 shows the number of companies in each fire department, and the size of crews on engines and ladder trucks. The Worcester Fire Department has more companies than any other city except Providence, and 5 of Providence's 28 companies are assigned to ambulance transport units (the Providence Fire Department provides EMS transport for the city). Most of the departments operate their trucks with 3–4 man crews.

<sup>\*\*</sup>Does not include 1 1-man airport crash/fire/rescue unit

| TABLE 8: | RATIO OF FIREFIGHTERS |
|----------|-----------------------|
|          | TO SUPERVISORS        |

| Worcester      | 2.87 |
|----------------|------|
| Bridgeport     | 3.05 |
| Hartford       | 3.38 |
| New Haven      | 3.29 |
| Providence     | 3.33 |
| Rochester      | 3.23 |
| Springfield    | 2.60 |
| Syracuse       | 2.37 |
| Waterbury      | 3.97 |
| Scottsdale, AZ | 2.30 |
| Lincoln, NE    | 2.87 |
| Modesto, CA    | 1.65 |
|                |      |

Table 7 gives a breakdown of supervisory personnel by rank for each department. Table 8 indicates each department's span of control, or the ratio of firefighters to supervisors. With 1 supervisory position for every 2.87 firefighters, Worcester ranks 3rd among the northeastern cities (that is, all but two of these cities have more firefighters per supervisor than Worcester), and 5th overall.

TABLE 9: SHIFTS, SCHEDULES, HOURS/WEEK

<sup>\*</sup>By New York state law, firefighters can work a maximum of 40 hours/week. In Rochester and Syracuse, firefighters work 42 hours/week and are paid compensatory time for 2 hours.

As Table 9 shows, schedules and hours worked per week are virtually identical in the fire departments in the northeast, whereas personnel in the western departments work different shift lengths and more hours per week.

<sup>\*\*</sup>During a shift rotation, each firefighter works 6 shifts, and has an average of 8 days off.

Table 10: Responses and Fire Incidents, 1996

Table 10 outlines total and EMS responses, and structure and non-structure fires, for each department. It also indicates what kind of EMS, if any, is provided by each department. Most departments surveyed provide EMS first response; Providence and Scottsdale also provide ambulance transport (which means that, comparatively speaking, they will have more EMS responses than departments providing only first response), while Springfield and Waterbury provide no EMS of any kind.

Although figures for responses and fire incidents were obtained from each department, the extent to which these figures are comparable is uncertain. Different departments define fires of varying types and extent as structure fires and as non-structure fires. With regard to total responses, the Research Bureau attempted to obtain a figure that was a reasonably accurate indicator of the number of times fire department personnel were dispatched in response to a request for some sort of emergency service, but here too, departments may include a range of types of requests for service in their figure for total responses.

Table 11 (below, p. 7) compares staffing for the twelve cities by adjusting current sworn strength for differences in population, area, number of responses, and number of fire incidents. Worcester ranks 5th overall in number of sworn personnel per 1,000 residents, and 6th in number of sworn personnel per square mile. It ranks 5th in the number of responses per sworn employee, 4th in number of total fire incidents per sworn employee, and 7th in number of structure fires per sworn employee.

<sup>\*</sup>Providence tracks structure and vehicle fires only

| Lincoln, NE     | 1.28                  | 3.75              | 43                       | 2.66                       | 0.66                           |
| Modesto, CA     | 0.78                  | 4.08              | 94                       | 9.59                       | 2.56                           |

Compared to the other northeastern cities, Worcester ranks somewhere in the middle in terms of staffing. Providence and New Haven, which rank above Worcester in number of sworn personnel per 1,000 residents, both perform EMS functions that Worcester does not; on the other hand, Waterbury, which also ranks above Worcester on this count, does not perform any EMS function. Worcester is 3rd-lowest in its number of sworn personnel per square mile, 3rd-highest in the number of responses per sworn employee, 2nd-highest in total fire incidents per sworn employee, and in the middle in number of structure fires per sworn employee. For the northeastern cities, Worcester has the average number of sworn personnel per 1,000 residents (2.76). The city is below average in regard to number of sworn personnel per square mile, number of total fires per sworn personnel, and number of responses per sworn personnel, and is above average in regard to the number of responses per sworn personnel.

What is perhaps more striking about these figures, however, as well as the figures for the number of uniformed fire personnel contained in Table 5, is the difference between the western and the northeastern cities. The northeastern cities are all much higher in their number of sworn personnel per 1,000 residents and sworn personnel per square mile. With regard to responses and fire incidents per sworn employee the picture is more mixed, but in general, Scottsdale and Modesto have higher numbers of responses per employee and of fire incidents per employee than their northeastern counterparts, while Lincoln has lower numbers on both counts than most of the northeastern cities.

These differences between the northeastern and western cities are undoubtedly accounted for in part by the differences in housing stock: housing in the northeast is significantly older, and the materials and type of construction typical of such housing stocks presumably present a greater fire protection problem than those in the western cities. Another factor with significant bearing on the staffing difference is the hours

worked by sworn personnel: fire personnel in every city in the northeast work 42-hour weeks, while those in Modesto and Lincoln work 56 hours, and in Scottsdale, 67 hours (according to fire officials the Research Bureau spoke to, a 56-hour week is typical of departments in western cities). The Research Bureau did not investigate whether these considerations are sufficient to account for the disparity in staffing levels between the western cities and Worcester and the other northeastern cities; such an investigation is beyond the scope of this report.

| Modesto, CA     | 14,481,684     | 82                 | 428,452         | 41,025            |

Table 12 presents current budgets and comparative measures for the twelve fire departments. In its gross budget figure, Worcester is about average when compared to the other northeastern cities. It is spending less per resident and per square mile than most of the northeastern cities, and roughly average amounts per sworn employee. However, the three western cities are spending substantially less than all of their northeastern counterparts in their current budgets and when their spending is adjusted. Worcester is spending approximately 63% more than Modesto, which spends the most per resident of the western cities. Given that the majority of fire department budgets is spent on personnel costs, this difference between the two sets of cities is not surprising.

One year ago, the Research Bureau issued a report (No. 96–3) suggesting that the City contract with an outside consultant for a comprehensive examination of the Worcester Fire Department. The report argued that changes occurring in both the city itself and the fire protection profession warranted a study of a variety of issues, including the number of personnel necessary to provide adequate fire protection for Worcester; work-week and shifts; span of control; kinds of equipment for future purchase; and appropriate locations for any new fire stations. The report estimated the cost of such a study at approximately \$100,000. Recently, there have been calls from

Worcester Fire Department officials for an addition of two firefighter classes over the next year, which would increase the number of sworn personnel to about 488 after taking attrition into account;<sup>2</sup> fire union officials have also suggested that the size of crews on engines and ladder trucks needs to be increased to at least 5 men. These developments, combined with the questions raised above concerning staffing differences, lead the Research Bureau to believe that the City administration should contract for such a study before hiring additional classes. Since the cost of each additional class is about \$750,000 per year, a one-time investment of \$100,000 in such a study makes sense.

# IV. POLICE DEPARTMENT STATISTICS

The Research Bureau collected data from the twelve cities on current police department staffing and budgets, shift scheduling and hours worked, total responses for 1996, and FBI Uniform Crime Report statistics for 1995.

| Modesto, CA    | 246 (u)          | 326                | 230   | 96       |

<sup>\*&#</sup>x27;u' = sworn; 'c' = civilian

Table 13 outlines authorized positions, number of sworn personnel, number of civilian personnel, and total personnel (i.e., sworn and civilian). Worcester ranks fifth among the cities surveyed in number of sworn personnel. Each northeastern city employs significantly more sworn personnel than any of the western cities. The number of civilian personnel varies widely among the cities; Worcester ranks 11th in the number of civilians employed. When sworn and civilian personnel are combined, Worcester

<sup>&</sup>lt;sup>2</sup>If the fire department's complement of sworn personnel was increased to 488, it would have the following effect on the categories in Table 11: uniform/1,000 residents, 2.95; uniform/square mile, 12.99; responses/uniform, 50.13; total fires/uniform, 3.85; structure fires/uniform, 1.13.

ranks fifth. With the exception of Waterbury, the western cities each employ fewer total personnel than any of their northeastern counterparts.

<sup>\*</sup>Includes plain-clothed sworn personnel and detectives equivalent in rank to patrol officers.

TABLE 15: RATIO OF PATROL OFFICERS TO SUPERVISORS

| Worcester      | 3.68 |
|----------------|------|
| Bridgeport     | 3.70 |
| Hartford       | 4.27 |
| New Haven      | 4.01 |
| Providence     | 4.27 |
| Rochester      | 4.28 |
| Springfield    | 5.25 |
| Syracuse       | 3.12 |
| Waterbury      | 4.50 |
|                |      |
| Scottsdale, AZ | 4.02 |
| Lincoln, NE    | 3.16 |
| Modesto, CA    | 4.00 |
|                |      |

Table 14 gives a breakdown of supervisory personnel by rank for each department. Table 15 indicates each department's span of control, or the ratio of supervisors to patrol or line officers. With 1 supervisory position for every 3.68 officers, Worcester ranks 3rd-highest in its number of supervisors relative to patrol officers among the cities surveyed.

TABLE 16: SHIFTS, SCHEDULES, HOURS WORKED PER WEEK

<sup>\*</sup>Springfield total responses include EMS 1st response, which is provided by the Springfield Police Department.

Table 17 attempts to give some indication of the demand load experienced by each police department by providing response data and FBI standardized crime report data. Similar problems as noted above with regard to fire department total response data apply here: police departments gather a varying range of responses to incidents and requests for service under this heading, and have different ways of defining what constitutes a single response (for example, Rochester's figure seems disproportionate to those reported by the other cities). The FBI crime reports may give a more accurate representation of the demand experienced by a department, but this is limited to incidents that qualified as types of crime; it does not include nuisance- or other calls for service responded to by police departments.

| AVG (Northeast) | 3.19                       | 19.62                 | 391                    | 29                     |  |
| Scottsdale, AZ  | 1.78                       | 4.30                  | 605                    | 40                     |  |
| Lincoln, NE     | 1.41                       | 4.16                  | 509                    | 50                     |  |
| Modesto, CA     | 1.30                       | 6.80                  | 522                    | 67                     |  |

Table 18 compares staffing for the twelve cities by adjusting current sworn strength for differences in population, area, number of responses, and FBI Uniform Crime Report totals. Worcester ranks 7th in number of sworn personnel per 1,000 residents, 6th in number of sworn personnel per square mile, 9th in number of responses per sworn personnel, and 8th in UCR crimes per sworn personnel. In regard to the latter two categories, it should be noted that Worcester's ranking is also affected by its relative number of responses and reported crimes, both of which are very low compared to the other cities (see Appendix B): for the year surveyed, Worcester had the lowest number of responses per resident, the lowest number of total reported crimes per resident, and the lowest number of property crimes per resident. It ranked relatively high (4th), however, in the number of violent crimes per resident.

Compared to the other northeastern cities, the Worcester police department ranks quite low in regard to staffing. It has the lowest number of sworn personnel per 1,000 residents and the second lowest number of sworn personnel per square mile (Worcester also has the lowest number of responses per sworn personnel and crime

reports per sworn personnel, but again this may reflect not only the department's number of sworn personnel, but its relatively low number of responses and reported crimes). But as with the fire department data, there is a significant difference in staffing levels between the northeastern and the western cities. Scottsdale, Lincoln, and Modesto each have much lower numbers of sworn personnel per 1,000 residents and per square mile than all of the northeastern cities. Scottsdale, Lincoln and Modesto also have relatively low levels of crime: they rank 7th, 10th and 11th in number of responses per resident, 9th, 11th and 5th in total crimes reported per resident, 12th, 10th and 9th in violent crimes reported per resident, and 7th, 9th and 6th in property crimes reported per resident (see Appendix B). However, as noted above, Worcester has an even-lower level of crime; it ranks lower than these cities in all categories except for violent crime reports per resident. Nonetheless, there is a substantial difference between Worcester and the three western cities both in number of responses per sworn personnel (189 vs. 606, 509 and 522) and in number of reported crimes per sworn personnel (25 vs. 40, 50 and 67). This suggests that there may be a difference in staffing levels between the western cities and Worcester and its northeastern counterparts even when differences in levels of crime and the demands for service experienced by a department are taken into account.

TABLE 19: POLICE DEPARTMENT FY97 BUDGETS

|                 | Current<br>Budget | \$ per<br>resident | \$ per<br>sq mi | \$ per<br>uniform |
|-----------------|-------------------|--------------------|-----------------|-------------------|
| Worcester       | 22,039,525        | 133                | 586,782         | 48,016            |
| Bridgeport      | 27,397,710        | 206                | 1,712,357       | 71,163            |
| Hartford        | 32,970,000        | 265                | 1,905,780       | 68,688            |
| New Haven       | 26,216,952        | 219                | 1,387,140       | 62,273            |
| Providence      | 25,000,000        | 166                | 1,351,351       | 57,870            |
| Rochester       | 42,019,600        | 182                | 1,173,732       | 61,164            |
| Springfield     | 29,101,113        | 195                | 906,577         | 55,431            |
| Syracuse        | 24,719,117        | 155                | 984,825         | 49,537            |
| Waterbury       | 19,474,045        | 188                | 680,911         | 59,012            |
| AVG (Northeast) | 27,659,785        | 190                | 1,187,717       | 59,239            |
| Scottsdale, AZ  | 28,876,954        | 189                | 458,364         | 106,557           |
| Lincoln, NE     | 19,354,231        | 95                 | 280,496         | 67,436            |
| Modesto, CA     | 29,599,861        | 168                | 875,736         | 128,695           |

Table 19 presents current budgets and comparative measures for the twelve police departments. In its gross budget figure, Worcester is spending less than all of the northeastern cities except Waterbury, and less than all of the western cities except Lincoln. It is spending less per resident, less per square mile, and less per sworn employee than all of the northeastern cities. Compared to the western cities, Worcester is spending less on all three counts than Scottsdale and Modesto, but more per resident and per square mile than Lincoln. In general, unlike in the case of the fire departments, there is no significant difference between western departments as a

group and the northeastern departments either in their current budgets or when their spending is adjusted. The figures in Tables 12 and 19 also reveal that in FY97, police and fire budgets in Worcester are equal. In 9 of the 11 cities surveyed, however, the police department receives substantially more funding than the fire department.
